

# Smart Factory - Internet of Things

# 1 Connection

Interoperability of system and data collection 1/2

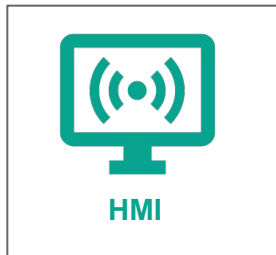

sensors

sensors

sensors

- State of the system
- Performance:
  - 1) Nr° Pouring ended;
  - 2) Nr° Complying Pieces.
- Critical parameters:
  - 1) Material Temperature;
  - 2) Efficiency pumping Units;
  - 3) Pressures.
- Consumption:
  - 1) Chemistry;
  - 2) Compressed Air;
  - 3) Nitrogen;
  - 4) Electric Energy;
  - 5) Water.
- Preventive and predictive maintenance based on actual use of the components.
- Alarms
- Operator Login

# Connessione

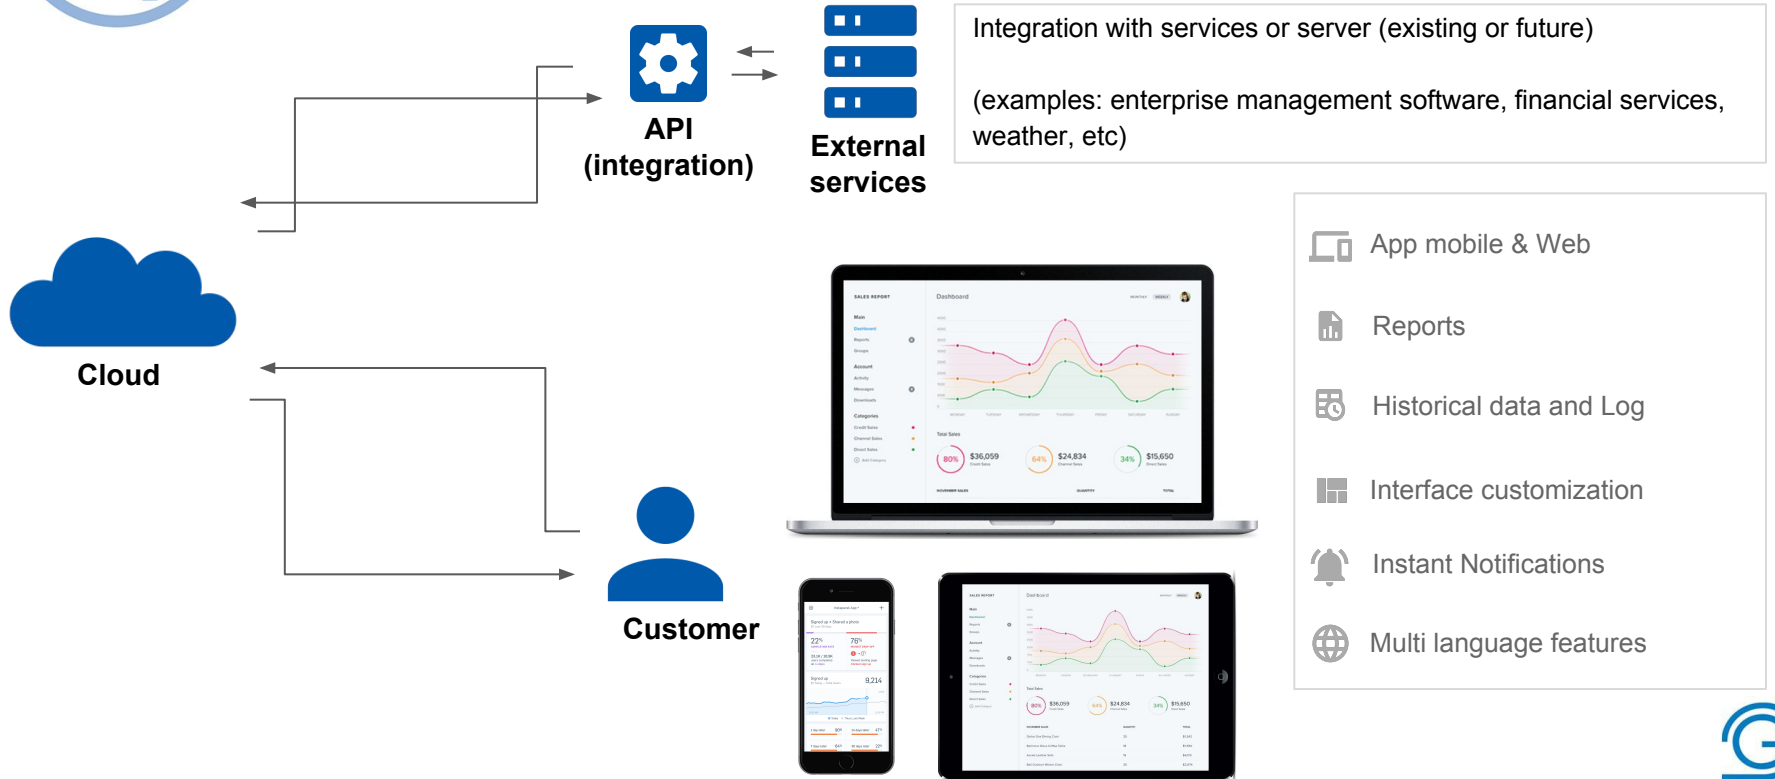

Interoperability of system and data collection 2/2

## 2 Digitalizzazione

Rapid access to information and tools for decision-making

3

## Intelligence

Data analysis and conversion into value

Data Analysis

Transformation

Value

- Preventive and predictive maintenance
- Optimization of energy consumption
- Reducing system downtime
- Performance analysis
- Optimization of business processes
